

Connect Instagram

Publish Reels and manage content from your own Instagram account. You need an Instagram Professional (Business or Creator) account and a Meta app.

Prepare your account

- 1 Open the Instagram app → Settings → Account type and switch to a Professional (Business or Creator) account.
- 2 If you manage a Facebook Page, link it to your Instagram account (optional but recommended).

Create a Meta app & get the App ID / App Secret

- 1 Go to <https://developers.facebook.com/> and log in, then open 'My Apps' → 'Create App'.
- 2 Choose the 'Business' app type and give it a name.
- 3 In the app dashboard, add the product 'Instagram' (Instagram API with Instagram Login).
- 4 Copy the App ID and App Secret from Settings → Basic.
- 5 Under Instagram → API setup, add the OAuth redirect URI shown in the Setup panel (your Redirect Base URL + /oauth/instagram/callback).

Connect in Social_Platform

- 1 Open the Setup panel and paste the Instagram App ID and App Secret into the Instagram row (a credential-holder does this once).
- 2 Click Connect on the Instagram row and authorise with your Instagram account.
- 3 The status turns to 'Connected'. You can now schedule and publish to your account.

Note: keep your App Secret / API Secret private — never share it publicly.
