

Connect YouTube

Upload and manage videos on your own YouTube channel using a Google Cloud OAuth client with the YouTube Data API.

Prepare

- 1 Make sure you have a YouTube channel on the Google account you want to use.

Create a Google Cloud OAuth client (Client ID / Secret)

- 1 Go to <https://console.cloud.google.com/> and create (or pick) a project.
- 2 Enable the 'YouTube Data API v3' under APIs & Services → Library.
- 3 Under APIs & Services → Credentials, create an OAuth client ID (type: Web application).
- 4 Copy the Client ID and Client Secret.
- 5 Add the authorised redirect URI: your Redirect Base URL + /oauth/youtube/callback.

Connect in Social_Platform

- 1 Paste the Client ID and Client Secret into the YouTube row of the Setup panel.
- 2 Click Connect and grant access to your channel.
- 3 The status turns to 'Connected'.

Note: keep your App Secret / API Secret private — never share it publicly.
